GLORIA EMEKA

SENIOR FRONTEND DEVELOPER | REACT • TYPESCRIPT • JAVASCRIPT • NODE.JS
Abuja, Nigeria | 07036630817 | glowemeka@gmail.com | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Frontend engineer with 3+ years of hands-on experience delivering 20+ production web applications and client projects, with deep strength in JavaScript, React, HTML/CSS, Node.js, APIs, testing, and UI implementation. Combining frontend engineering with a graphics-design background, I build responsive, accessible, high-performance interfaces. I am highly experienced in owning projects from requirements and architecture through implementation, testing, deployment, and post-launch iteration.

CORE TECHNOLOGIES

Frontend: JavaScript (ES6+), TypeScript, React, Next.js, HTML5, CSS3, Tailwind CSS, responsive design, accessibility. Backend: Node.js, Express, REST/JSON APIs, MongoDB, Local Storage. Engineering: Automated testing, Node Test Runner, unit testing, integration testing, browser DevTools, Git/GitHub. Performance: Core Web Vitals, Lighthouse, code splitting, lazy loading, image optimization, SEO, semantic HTML. Design: Figma, UI/UX, design systems, responsive layouts, visual hierarchy.

PROFESSIONAL EXPERIENCE

Frontend Developer & E-commerce Developer | Gloré Classique

February 2025 – Present | Remote
Website: https://gloreclasique.netlify.app

I. Developed and maintain a responsive e-commerce storefront for a fashion accessories brand, with product listings, product variations, colour selection, stock indicators, and order summaries.
II. Integrated Paystack checkout, connecting the frontend checkout flow to a serverless API route for transaction initialization and secure payment processing.
III. Built the customer checkout journey, including order review, delivery information, payment selection, and order confirmation flow.
IV. Focused on responsive design, user experience, and clear transaction information to make shopping and checkout straightforward on mobile devices.

Independent Freelance Developer

August 2023 – Present

I. Operating as a solo full-stack developer, I delivered 20+ production web applications for 4 paid clients, owning the frontend architecture, implementation, responsive behavior, testing, deployment, and post-launch fixes from end to end.
II. I successfully reduced average Lighthouse performance issues across client projects by 42% through image optimization, lazy loading, code splitting, semantic markup, and targeted CSS/JavaScript improvements.
III. Furthermore, I improved average mobile page-load performance by 38% across audited projects while maintaining responsive layouts across Chrome, Safari, Firefox, and Edge.
IV. By building reusable UI patterns and component structures, I reduced repeated implementation work by approximately 30% across related pages and features.
V. I also worked directly with clients to translate requirements into functional user flows, balancing visual fidelity, usability, accessibility, technical constraints, and delivery timelines.

Peace for Humanity Foundation | Web Developer
July 2024 – February 2026
Website: https://www.pfh-foundation.org

I. I increased Google Search Console impressions from 30 to 456 (+1,420%) within two months through semantic HTML, page structure improvements, metadata optimization, internal linking, and targeted on-page SEO.
II. During this optimization period, I also increased organic clicks by 63% and improved the number of indexed/visible pages by 40%.
III. I generated 460+ tracked page views through improved information architecture, clearer user flows, and functional CMS workflows.
IV. Additionally, I maintained frontend quality through automated and manual regression testing, resolving cross-browser and responsive UI issues before release.

SELECTED GITHUB PROJECTS

ClaimCheck — Digital Health-Literacy Application | React, Vite, Express, PubMed, WHO/CDC APIs
https://claimcheck-1.netlify.app

I. Built independently as a full-stack application, ClaimCheck guides users through a five-stage PAUSE → IDENTIFY → CHECK → VERIFY → DECIDE workflow for evaluating health claims.
II. I implemented the React/Vite frontend and Express backend, integrating external evidence sources and structured verification logic to return evidence-based claim assessments.
III. I designed defensive states for API failures, timeouts, incomplete evidence, and ambiguous results, preventing unsupported conclusions and keeping the user informed.
IV. I optimized the production build from 4.6s to 2.0s LCP (57% improvement) and achieved a 94 Lighthouse performance score on mobile after image, bundle, and rendering optimizations.
V. Furthermore, I added automated tests for core verification and error-handling paths, achieving 82% statement coverage across the tested application logic.

Applyd — Job Application Tracker | JavaScript, HTML, CSS, Local Storage, Node Test Runner
gloweeyahh.github.io/Final-project

I. I built a dependency-light browser application for managing job applications across Saved, Applied, Interview, Offer, and Rejected states, complete with search, follow-up dates, CSV export, and dashboard statistics.
II. I implemented persistent Local Storage with validation and defensive recovery for empty, malformed, blocked, and outdated saved data.
III. I created automated tests for core state-management and validation logic, reaching 90% coverage across the tested modules.
IV. Ultimately, I reduced the initial JavaScript payload by 31% and achieved a 97 Lighthouse performance score through asset optimization and lean client-side architecture.

EDUCATION

Miva Open University: Master of Public Health — Expected April 2027
University of Abuja: B.Sc. Biological Sciences — 2018–2023

CERTIFICATIONS & CONTRIBUTIONS

I. Google UX Design Professional Certificate — Coursera, 2026
II. Google Foundations of User Experience (UX) Design — 2026
III. Google Build Wireframes and Low-Fidelity Prototypes — 2026
IV. First Contributions — Open-Source Contributor (Pull Request #116623)
V. Digital Onboarders / DL4ALL — Technology Adviser & Mentor
